

## TECVAC Finishes Garage Repairs

*“TECVAC, Inc. has completed extensive repairs on Virginia Parking Garage*

*Herndon/Monroe Park'n Ride*

*Fairfax County Selected  
Tecvac, Inc. To Perform  
Extensive Repairs To  
Herndon Garage*

Herndon, VA — TECVAC, Inc. has applied its exclusive PermeJect™ and CleanSet™ Permeation Injection Repair Processes to numerous fractures located in the floors, beams and columns of a new precast garage structure.

Tecvac was selected by the Harry Weiss/Deleuw Cather team to perform extensive repairs on the four level structure because its proprietary method of vacuum installed repair resin. CleanSet™ eliminates the grinding and marring of the repaired member normally associated with conventional pressure injection methods.

The process gets deep into the fracture and uses vacuum to more thoroughly fill interconnecting cracks and voids with methyl methacrylate resin. This combination of vacuum induction, with water thin repair resin, conveys a number of advantages over conventional pressure injection. PermeJect™ situates the resin into the finest width of cracks, smallest voids and interconnected micro fissures by manipulating flow within the fracture.

Among other repairs, Tecvac also installed a great number of patches using its PatchMatch™ Process. By mixing a special formulation with Sika Polymer Repair materials, Tecvac was able to install patches closely matching the existing concrete color.
