

Tecvac, Inc. Brings The Total Team To Your Project

While architects have become more specialized and confine their practices to a few building types, and contractors have tended to be specialized in a few different disciplines, the Tecvac team will integrate the latest materials, systems and techniques to into your improvements. Some of the many team approach advantages which are seldom found with traditional acquisition methods are:

- A specialized investigator of the problems who will work closely with your personnel to ascertain requirements...
- A specialized designer for the specific task identified for retrofit or improvement...
- A specialized peer review of the architect and engineers renderings for coordination...
- A quality assurance team with oversight responsibility...
- A value engineering team monitoring the project for prudent cost expenditures...

- A hard budget of costs expected to complete the project...
- A contractor who is involved with the project from inception...

The working team will establish the design criteria that will incorporate your firm in the evaluation and testing of specific design solutions. After the first phase report establishes the extent of the deficiencies, the revealed criteria and background studies will be used to develop concepts and alternative concept approaches. The validity of these concepts can then be tested with sketches and technical site drawings that demonstrate their feasibility and appropriateness for the condition.

There is great advantage with this Total Team concept; construction drawings can be prepared while the work is begun; fast track construction with a thoroughly knowledgeable team and a fixed budget for completion.

To discuss how we might assist you with your next restoration project, or a current problem you have with concrete, masonry or stone call us toll free. We will be glad to help.
