

# **TecSeal™ Permeation Leak Repair Process**

---

*A method for sealing singular and distinct leaking cracks in a member or structure.  
Stubborn leaks are no match for this distinctive leak repair process.*

**TECVAC'S™ PROPRIETARY LEAK SEAL  
PERMEATION PROCESS USES NEGATIVE FORCES  
TO SEAL LEAKS IN CONCRETE, MASONRY AND  
STONE MORE EFFECTIVELY AND PERMANENTLY.**

Unlike conventional pressure injection methods, TecSeal™ is a peerless negative force process that *draws* repair material into the fracture zone. There are a number of distinct advantages associated with this method; not the least of which is the ability of the process to situate the repair resin into the finest width of cracks, smallest voids and interconnected micro-fissures.
