

TecSeal™ Stops Leaks!!

Where Others Have Failed, The TecSeal™ Permeation Leak Repair Process Stops Leaks...

Wednesday, December 09, 2009

Washington, DC — The TecSeal™ Permeation Leak Repair Process is a specialty application technique developed by Washington, DC based TECVAC, Inc. to methodically and efficiently install repair resin into leaking cracks in concrete, masonry and stone. Around Washington, and around the world, where others have tried and failed, TecSeal™ has succeeded in stopping chronic water leak problems once and for all, often without drilling a single hole.

To high light a few: The Veterans Administration Headquarters Building leaked for over 40years. Coffers and pumps were installed in the basement every 50 feet to deal with the problem. Tecvac technicians had every leak stopped in just eight days. Union Station set out 50gal trash cans to catch water during rains - Tecvac technicians identified the leaks and successfully repaired. Two different contractors attempted repairs at the Ballston metro station for over 2 months - Tecvac stopped the leaks. Where no other company would, Tecvac stepped up to the ten year warranty of leak repairs required at Reagan National Airport.

If you have a stubborn leak, there is no comparison to the efficiency and longevity of TecSeal™. Call us today...
